

SUMMARY

Data Science student with practical expertise in **Data Analysis, Machine Learning, Natural Language Processing (NLP), Regression Analysis, Time Series, and Deep Learning** (including **CNN, LSTM, and GRU**). Proficient in **Python, SQL, MS Excel, and Power BI**, with a strong statistical foundation from **NMIMS and Amity University**. Experienced in designing **dashboards, Predictive Analytics, Data Visualization**, and optimizing **forecasting models**, with practical expertise in enhancing **data-driven insights** and supporting decision-making processes. Demonstrated leadership by orchestrating large-scale hackathons and fostering both academic and extracurricular engagement.

EDUCATION

- NMIMS, Mumbai | Masters in Data Science & Business Analytics | **CGPA: 9.50/10**
 - Gujarat Technological University | Bachelors in Computer Engineering | **CGPA: 8.99/10**
 - A B Higher Secondary English Med. School | 12th GSEB Board | **Overall grade: 63%**
 - Sir J J Higher Secondary Eng Med. School | 10th GSEB Board | **Overall grade: 71.16**
- 2024-2026

2020-2024

2019-2020

2017-2018

Professional Experience

- GenAI Intern — LTIMindtree**

Feb 2026 – Present

 - Developing enterprise-grade Generative AI solutions using LLMs, RAG, and Agentic AI
 - Building AI assistants for finance and business intelligence use cases
 - Implementing vector databases (FAISS), prompt engineering, and fine-tuning (LoRA/PEFT)
 - Deploying scalable applications using Streamlit, Docker, and AWS
- Software Developer Intern, Jainam Broking Limited**

Jan 2024 – Jun 2024

 - Developed Backend strategies for a fintech platform using Python and Django, with a focus on performance optimization and scalability.
 - Designed and implemented APIs, data pipelines, and database solutions using MySQL and MongoDB to improve data processing efficiency and support seamless system integration.
 - Tools Used:** Python, Django, MySQL, MongoDB, Git.

PROJECTS

- Flight Price Prediction - 2025**

 - Designed and developed a Flight Price Prediction web application using Streamlit and Random Forest Regressor to estimate airfares based on key features such as airline, number of stops, duration, and departure/arrival timings.
 - Performed comprehensive data preprocessing, feature engineering, and model training on a real-world flight dataset to ensure accurate and reliable fare predictions.
 - Built a responsive and user-friendly interface for dynamic input handling and real-time fare prediction, with integrated model tuning and smooth frontend-backend interaction for enhanced user experience.
 - Tools Used:** Python, Streamlit, scikit-learn, Pandas, Matplotlib
- Mutual Fund Portfolio Recommendation Solution - 2025**

 - Developed a scalable Mutual Fund Recommendation web application using Python Flask and Pandas, enabling efficient data processing and dynamic, return-based fund filtering to support user decision-making.
 - Containerized the application with Docker and deployed it on AWS EC2 for reliable, consistent cloud hosting with optimized resource utilization and high availability.
 - Tools Used:** Python, Flask, Pandas, Docker, AWS EC2
- Ai-Based Product Recommender for Retail & E-Commerce - 2025**

 - Designed and implemented a multimodal product recommendation system using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and NLP to deliver intelligent, interactive, and personalized product suggestions.
 - Integrated advanced features such as image-based product discovery, voice/text search, multilingual chat support, product comparison summarization, FAQ generation, and inventory assistance to enhance user engagement and system versatility.
 - Developed an interactive Streamlit UI simulating agentic AI behavior, enabling dynamic, real-time interactions without reliance on static catalogs, significantly improving product relevance and discovery for retail and e-commerce platforms.
 - Tools Used:** Python, Streamlit, LLMs, RAG, NLP, Computer Vision.
- FinWise: Smart Finance Prediction Assistant- 2025 - LTI Mindtree**

 - Developed an AI-powered financial assistant using domain-adapted Large Language Models to provide contextual insights on stocks, company overviews, and investment strategies through natural language queries.
 - Enhanced the assistant with real-time financial data integration, enabling dynamic and accurate responses to user-specific questions on market trends, stock performance, and business fundamentals.
 - Implemented multilingual and voice-enabled capabilities for broader accessibility, enabling seamless user interaction and personalized financial guidance across diverse input modes.
 - Tools Used:** Python, ChatGrok , Streamlit, LLMs, ML

SKILLS

- Programming Languages:** Python (Pandas, NumPy, Matplotlib, Streamlit, Seaborn, TensorFlow, Scikit-learn, Keras), Javascript, HTML, CSS, SQL, MongoDB
 - Tools and Technologies:** Django, OpenAI, Docker, PowerBI, AWS, Git
 - Soft Skills:** Creative Thinking, Problem Solving, Communication, Event Management, Leadership, Team Collaboration, Adaptability, Quick Learning, Attention to Detail, Time Management

Certifications

- Data Analytics Job Simulation - [Deloitte](#)
 - Generative AI for beginner - [Great Learning](#)
 - Introduction to Applied Data Science with Python - [Simplilearn](#)
- 2025

2025

2025

Workshop Conducted

- HANDS-ON DATA EXPLORATION: POWER BI & MACHINE LEARNING WITH REAL DATASETS - CKPCET, Surat 2025
- AI & DATA SCIENCE WORKSHOP: PRACTICAL MACHINE LEARNING & POWER BI APPLICATIONS - NMIMS, Mumbai 2025
- INDUSTRY-ORIENTED WORKSHOP ON DATA ANALYTICS, AI & VISUALIZATION USING POWER BI - SCET, Surat 2025
